HEALTHCARE TECHNOLOGY COMPANIES RALLY TOGETHER TO CREATE DIGITAL CORONAVIRUS SCREENING SOLUTION

AKRON, Ohio (March 20, 2020) — [GeneratorWorks](#), an innovative technology company with a suite of healthcare software and hardware products, has announced a partnership with clinical algorithm platform [SmartDocMD](#). Together, they have released SecurePass, a digital COVID-19 risk stratification and screening survey.

With bold and proactive steps, SecurePass creates a solution that effectively surveys patients and healthcare communities to identify possible COVID-19 risks. With this information at hand, healthcare facilities can better inform and remotely support those showing possible high-risk indicators.

SecurePass is powered by SmartDocMD's clinical algorithms that combine CDC Guidelines for risk assessment, patient symptoms, and medical comorbidities to identify and help segregate higher risk patients.

The product plugs in patient demographics, geolocation, risk factors, illness symptoms, severity and comorbid conditions that can be viewed in real time and shared with GeneratorWorks portfolio of products as well as infectious disease teams, including the Center for Disease Control.

SecurePass has the strength of the GeneratorWorks suite of healthcare software and hardware products and is even stronger when tied to:

- [GetOnHealth](#), a virtual clinic platform where patients can be assessed and connected via a virtual visit to their primary care or other necessary doctors.
- [Queue](#), currently in service to over 50 hospitals nationwide, helps healthcare providers give their patients an overarching positive experience as an organized intake, check-in, and transfer system.

"Our world has changed with the current COVID-19 pandemic, and health systems are becoming overwhelmed," states CEO Blake Squires. "Quick-to-act and scalable digital tools need to be implemented. Understanding community health and provider needs are critical to ensuring the safety and ongoing operations of healthcare facilities and workers. With our collaboration to create SecurePass, we can do just that, while keeping patients informed, connected and safe."

"As health systems are scrambling to contain COVID-19, bold, collaborative action is our only course," explains Brian D'Anza, MD, President and Founder of SmartDocMD. "SmartDocMD's clinical algorithms work within SecurePass to make sure the right patients are being seen at the right time. It ensures health systems can triage patients before they spend hours sitting in the ER, clinic, or other hospital site, which reduces transmission of this highly contagious disease."

###

ABOUT: GeneratorWorks was founded by a diverse consortium of experienced investors, product developers, marketers, and business savvy, connected, entrepreneurs. Their portfolio is a family of healthcare software and hardware products including: Queue, which helps healthcare providers give their patients a great patient intake, check-in, appointment, interdepartmental flow and overall patient experience.

RelyOn Health, a patient transparency tool inclusive of eligibility, cost predictor and upfront patient payment tools.

GetOn Health, a virtual clinic platform that helps doctors schedule their patients in large numbers, notify those patients and manage non-face-to-face access to care.

ABOUT: SmartDocMD's clinical algorithms evaluate patients' symptoms to ensure timely and efficient evidence-based care. An "e-visit" platform, SmartDocMD combines clinical guidelines to provide real time, on-demand health assessment for medical conditions such as sinus infections, urinary tract infections, pink eye, among others. Patients are able to connect via email and text message with providers to further review data and provide a care plan. All of SmartDocMD's solutions are created to improve the quality of care along with the cost and convenience. And, in so doing, they aim to improve the lives of patients and providers.
